Basel IV is a huge change for the market. It will have significant impact on a bank’s business by increasing the constraints and rules, banks are operating with. These changes will impact the full operational Basel processing chain: no “big ticket” will be left untouched. In recent times, Basel Committee has imposed cross-dependencies that necessitates more than ever a proper upfront design of the whole Basel architecture to make sure end results will be consistent. Siloed thinking – everyone is the expert of their own domain – is a major risk that Basel implementations face, and the most hidden as well. This check list aims at helping you to avoid these major pitfalls and elaborate the best path for you for adopting a holistic approach to risk management.

CHECKLIST FOR BASEL IV

**01 Completeness**
Do you have all solutions components required for Basel IV? Are these functionalities delivered by multiple siloed solutions? Are you able to maintain consistency in data and results? See the list of components required

**02 Cross-Consistency**
Are your Basel calculations leveraging the same sets of data that is used in Financial Risk calculations? e.g., in Counterparty Credit Risk, are these consistent across Credit, CVA, Leverage and Exposure Limits?

**03 Reconciliation by design or manual effort**
How much reconciliation, control and correction processes do you need to put in place? How much ongoing cost is that generating?

**04 Have you considered using your Basel technology to drive business imperatives?**
Across risk classes, are you able to use Basel IV calculations and analytics for business? For example, use the ALM system for LCR/NSFR, use the Basel IV Credit Risk technology investment to calculate Economic Capital

**05 ICAAP/ILAAP**
Can you project your exact capital requirements over medium to long term? Can you project your exact Liquidity LCR and NSFR risk over any specific interval, at a desired frequency?

**06 Group Prudential Consolidation**
Are you correctly applying the rules for prudential consolidation? Can you report the differences between prudential and financial consolidation figures?

**07 Transparency**
Are you well prepared to explain to internal and regulatory auditors how each number within each historical regulatory submission was produced?

**08 Operational Efficiency**
How many days do you take to produce your Basel group reporting? How many error corrections are needed per cycle? Are you able to submit your reports right first time? How many man days does it take for Basel reporting?

**09 Data Versioning/Lineage**
Can you follow data through all stages of reporting process? Do you have the ability to trace reported data back to its sources (drill back), and how it got modified through the calculation stages?

**10 Subject Matter Expertise**
Do you have the bandwidth to analyze the continually evolving guidelines from the regulator? Do you currently have the resources necessary to translate these guidelines into technology and reporting requirements? How do you track changes and incorporate the modifications?

**11 Analytics**
Are your regulatory reports giving you useful insights into your business? (variance analysis, trend analysis, ad hoc, cash flow projections, balance sheet projections)

REMEMBER
Correct, accurate and comprehensive implementation is the minimum expectation of your supervisors. Banks should not lose sight of the importance of preparing for Basel IV and the many difficulties it will create along the way. Wolters Kluwer is committed to help you pave your road to Basel IV with an upfront design of risk technology architecture that helps remove barriers triggered by traditional silo structures and generates a deeper insight for the entire enterprise.

Leveraging Basel IV to help your business is the way to move from pure costs into healthy ROI. ICAAP and ILAAP, that are under the direct responsibility of the management, clearly indicate the direction: they combine regulatory metrics and economic internal metrics, business-as-usual and adverse scenarios, current situation, and future outlooks at different horizons. As these can really bring incredible value to the bank, Wolters Kluwer has strategically designed a solution which not only addresses Basel IV requirements but integrates all these dimensions into the same application. With our long-standing expertise in the finance, risk & regulatory reporting, our commitment to your organization’s success extends well beyond the implementation of the solution.

You can optimize your investment by scaling it up across your entire group. Using the same Basel solution across the different entities is a very concrete way to optimize investment and reduce TCO. On top of that integrating prudential consolidation leads to group automation and brings significant operational benefits.
