Lippincott Professional Development Collection

Lippincott Professional Development Collection

Lippincott Professional Development Collection is an online, evidence-based, clinical education and competency validation solution offering continuing education for your staff and optional integration with your facility Learning Management System (LMS).

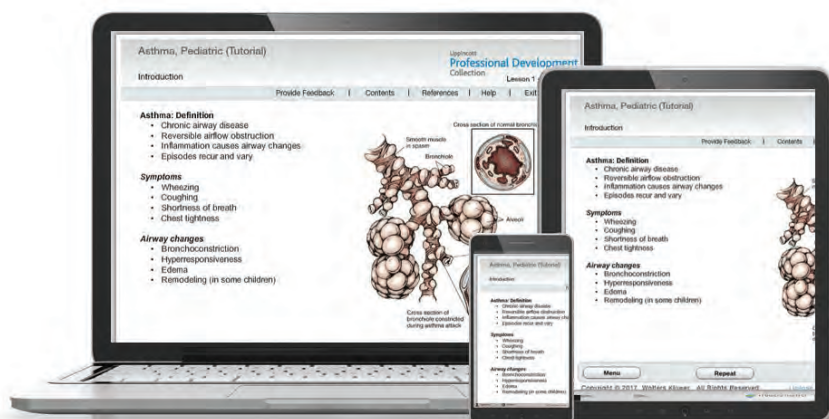

This robust, growing collection of over 370 clinically-focused online courses covers 39 subject areas and is specifically designed to:

- Ensure staff competence
- Satisfy CE requirements
- Increase clinical knowledge
- Optimize nursing performance
- Improve patient outcomes

Clinical educators and NPD Specialists benefit by having a comprehensive collection of up-to-date, online education programs. Easily integrating with most LMSs, this product enables educators to streamline and customize their staff education programs, track learning progress, and ultimately ensure competency.

For additional learning and remediation, we've embedded over 6,500 high-yield information links to our sister point-of-care products, **Lippincott Procedures** and **Lippincott Advisor**, reinforcing the knowledge obtained from each course, and ultimately, empowering nurses to deliver evidence-based patient care at the bedside.

The **Lippincott Professional Development Collection** platform includes basic LMS-like administration capabilities making it easy to assign courses, track competencies and manage overall staff competency. For facilities preferring to use their own tracking system, **LPD Collection** offers AICC-compliant LMS integration.

"For clinical educators, Lippincott Professional Development Collection makes it easy to support and educate our staff. Before having Lippincott, we created our own content. This was very time consuming, and a lot of work to continually update."

"Lippincott Professional Development Collection is always up-to-date, and always evidence-based. Whenever we see someone struggling, or if we have someone on a performance plan, we assign them the relevant LPD Collection modules to help strengthen their skills and confidence. It is so easy to assign to our staff."

— Sheila Blackmur, MSN, RN-BC, CMSRN, Clinical Educator, and Beth M. Weese, MSN, RN, GCNS-BC, Clinical Educator, Southwest General Health Center, Middleburg Heights, OH

Maintaining Compliance with National Guidelines

To help you ensure compliance, we've partnered with Joint Commission Resources (JCR) on a series of co-developed courses that promote patient safety and compliance, support disease-specific care certification in heart failure and stroke, and advanced certification in joint replacement.

Our development team enlists leading subject matter experts to write and review all course content. And, as the official publisher of The Joint Commission, JCR uses The Joint Commission's experts to verify that all courses meet accreditation and certification requirements.

Each dynamic online course contains a variety of case studies, competency assessments, and tutorials delivered in easy-to-use, interactive formats. Pretests and posttests, embedded self-assessments, video, images, charts, tables, and audio add realism and improve information retention.

- Heart Failure Disease-Specific Care**—With the aging population growing, the prevalence of heart failure will undoubtedly increase. This program offers the the most current clinical information on signs, symptoms, and risk factors for developing heart failure; pharmacologic and non-pharmacologic management of heart failure, advanced and basic diagnostic testing, and special populations considerations.

- Stroke Disease-Specific Care**—Stroke is one of the leading causes of death in the United States. This online learning program offers the latest details on the signs, symptoms, and risk factors for strokes, hemorrhagic stroke pathophysiology and treatment, ischemic stroke treatment, stroke prevention, acute neurologic complications, discharge planning, pharmacologic therapies, rehabilitation, and recovery.

- Patient Safety**—Ensuring the consistent safety of patients is one of the biggest priorities for U.S. hospitals. This program offers the latest details on understanding patient safety, such as reducing the risk of patient falls, improving the safety of medication use, caregiver communication, and patient identification accuracy.

- Compliance**—Failure to comply with federal regulations can result in considerable financial consequences for facilities. This program provides the latest details on catheter-associated urinary tract infection prevention, pressure injury care and prevention, hand hygiene, surgical site infection prevention, and prevention of health-care associated infections with multidrug-resistant organisms.

- Joint Replacement**—The expanded requirements in The Joint Commission's new advanced certification in total hip and total knee replacement cover surgical transitions of care and include increased focus on evidence-based pain management and quality of life issues. By addressing areas identified as high risk for medical error and miscommunication, the new certification aims to proactively structure preoperative, perioperative and postoperative care for more reliable patient outcomes.

Highlighted Programs

Nursing Professional Development Practitioner Program (Association for Nursing Professional Development)

To further support nursing professional development (NPD) specialists, we've partnered with ANPD on a series of jointly provided, CE-accredited webinar programs. The recordings of each live event are included in the LPD Collection library and include topics such as creative teaching strategies, showing ROI for professional development activities, legal issues for educators, outcome measures, and more.

ECG Interpretation Program

These programs include interactive tutorials designed to explain how to accurately interpret basic and 12-Lead electrocardiography (ECG) rhythm strips, along with basic and advanced breath and heart sounds, as well as:

- Anatomy and physiology of the cardiac system
- Heart, respiratory system, and the cardiac cycle

Preceptor Preparation Program

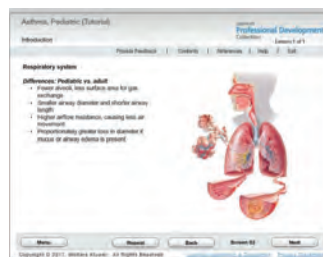

This program teaches experienced nurse employees how to serve as preceptors for new nurse hires, student nurses, or staff nurses transitioning to a new department. It includes unique courses that provide the educational foundation for aspiring nurse preceptors to be successful in this role, including roles and responsibilities, principles of adult teaching and learning, assessment and planning, implementing and evaluating, and dealing with difficult situations.

Specialty Training Programs

These programs are designed to educate and evaluate appropriate nurse diagnoses, assessments, and interventions associated with the care of a patient. They target clinical needs of a particular care area, sub-specialty department, or clinical subject.

HCAHPS Related Content

HCAHPS scores affect not only federal reimbursement, but a facility's public reputation for quality patient care. These courses were designed to support the foundational requirements of HCAHPS patient surveys, with competency training in key survey areas such as communication, pain management, communication about medications, and discharge information.

Additional Program Sets

Specialty Area Programs

- General Medical-Surgical Nursing
- Cardiovascular Care
- Critical Care Nursing
- Obstetric Nursing
- Pediatric Nursing
- Behavioral Health Case Study
- Neurologic Care
- Orthopedic Care
- Infection Control
- New York Infection Control
- Hospital-Acquired Conditions
- Assessment
- Heart Failure Disease-Specific Care (*Joint Commission Resources*)
- Leadership and Management
- Pain Management
- Wound Care
- Long-Term Care
- Stroke Disease-Specific Care (*Joint Commission Resources*)
- Joint Replacement (*Joint Commission Resources*)

Clinical Case Studies and Tutorials Program

- Clinical Case Studies and Tutorials

Competency Evaluation Programs

- Medical-Surgical Nursing
- Critical-Care Nursing
- Emergency Nursing
- Pediatric Nursing
- Obstetric-Gynecologic Nursing
- Breath & Heart Sounds
- ECG Rhythm Strip Interpretation
- Patient Safety
- Sepsis

Mandatory Programs

- Mandatory, Hospital
- Mandatory, Behavioral Health Care
