Biomedical Research Grants—ÜberResearch
Predicting the future of research

Biomedical Research Grants— ÜberResearch is a searchable database of awarded research funding that includes more than 600,000 indexed records. Updated monthly, ÜberResearch allows you to retrieve data in real time rather than waiting years for results to publish. The database provides clinical researchers, grant writers, and research funders access to the information they need to forward their goals and inform their strategy.

ÜberResearch is an intelligence tool to help you make better business decisions. Use it to learn:

- **Who else is funding research in a particular area**
- **How funding is changing over time**
- **Trends in funding and in research projects**

How can ÜberResearch help your organization?
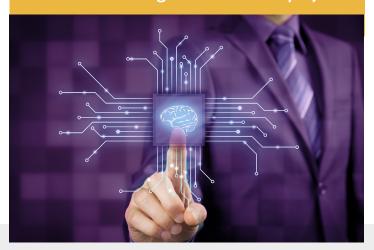

Inform Strategy
Increase overall subject area knowledge and use this intelligence to widen the scope for audience outreach and publication support. Understand the international context and background and increase awareness of what is going on externally before research begins. Locate research hotspots and identify the main funders and institutions in those areas.

Analyze Trends
Funding information can tell you not only what research is happening now but also what will happen in the near future. This allows you to understand what is being done before results are published.

Check Overlap
At the individual project level, ÜberResearch can identify all projects or publications that are related in scope. Users can get instant insight into what research activity is already present in the exact area of a new project.

Identify Potential Reviewers
Locate and organize experts to convene a panel or to review new applications. ÜberResearch automatically identifies experts in the database and even shows potential conflicts of interest.

Give everyone at your institution fast, easy access to the funding sources they need to support their research projects!
